

CHECKLIST ENVIRONMENTAL ASSESSMENT

Project Name: Teton 07-3D Seismic : (Permit # 1505)

Proposed Implementation Date: October, 2007

Proponent: Conquest Seismic Services: 408 , 602 - 11th Av. S.W. Calgary, AB T2R 1J8 (403) 265- 7472

Type and Purpose of Action: Conquest Seismic Services is proposing to conduct a single phase 3-D seismic project across 2922.8 acres of state owned mineral lands in order to better define the presence of subsurface hydrocarbon bearing structures. The project is expected to cover approximately 4.63 square miles of state owned surface and sub-surface area consisting of a combination of native grass- lands and cultivated small grain crop lands. Equipment to be used will be rubber tired ATV type vehicles. The energy source will be via Vibroseis technique.

Location:

Township 26 North, Range 7 West

Section 02: Lot 2: 42.8 acres

Section 12: SENW, S2NE4: 120 acres

Township 27 North, Range 6 West

**Section 09: S2NE4, N2SE4, SWSE, SW4
360 acres**

Section 16: All: 640 acres

Section 17: E2: 320 acres

Section 19: E2NW4: 80 acres

Section 20: N2N2: 160 acres

Section 27: E2, E2SW4: 400 acres

Section 34: NENW, N2NE4, SENE: 160 acres

Section 35: NW4: 160 acres

Township 27 North, Range 7 West

Section 35: NWSW, S2SW4: 120 acres

Section 36: NW4 : 160 acres

Township 27 North, Range 7 West

**Section 35: S2NW4, SWSE, NWSW, SESW,
200 acres**

County: Teton County, Montana

I. PROJECT DEVELOPMENT

1. PUBLIC INVOLVEMENT, AGENCIES, GROUPS OR INDIVIDUALS CONTACTED: Provide a brief chronology of the scoping and ongoing involvement for this project.	The Department of Natural Resources and Conservation (DNRC) has been petitioned by Conquest to conduct a 3-D seismic project across the above referenced tracts of state lands. LXL Consulting Services has been hired on behalf of Conquest to complete the seismic project. The Montana DNRC sent out a scoping letter to the appropriate state surface lessee(s), regarding this proposed project. The scoping letter identifies the location of the proposed seismic project and how damages will be settled with Conquest.
2. OTHER GOVERNMENTAL AGENCIES WITH JURISDICTION, LIST OF PERMITS NEEDED:	The Montana DNRC's, Conrad Unit Office, Minerals and Management Bureau, and the Montana Board of Oil & Gas are the only governmental agencies with jurisdiction for this type of project. Conquest will need to obtain a seismic permit from the Montana DNRC, prior to conducting any seismic activity on this tract of state land. The seismic company that has been contracted to do the seismic work under this permit must have a valid permit with the county and have registered their bond with the Secretary of State's Office.
3. ALTERNATIVES CONSIDERED:	<p><u>Action Alternative:</u> Grant Conquest permission to conduct a 3-D seismic project for the exploration of natural gas formations across the above referenced tract of state land. The Montana DNRC will issue Conquest a seismic permit to conduct a seismic project across the above listed tracts of state land.</p> <p><u>No Action Alternative:</u> The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state land.</p>

II. IMPACTS ON THE PHYSICAL ENVIRONMENT

RESOURCE	POTENTIAL IMPACTS
<p>4. GEOLOGY AND SOIL QUALITY, STABILITY AND MOISTURE: Are fragile, compactible or unstable soils present? Are there unusual geologic features? Are there special reclamation considerations?</p>	<p><u>Action Alternative:</u> The soils will receive a minimal disturbance with this type of activity. The proposed seismic project will only take place while the ground is frozen or dry. No unusual geological features are present on this tract of state land. The soils are suitable for this type of activity, but may experience some compaction due to the heavy equipment that is used for this type of project. There are no special reclamation considerations for this project.</p> <p><u>No Action Alternative:</u> The soils that are located on this tract of state land will not be disturbed. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.</p>
<p>5. WATER QUALITY, QUANTITY AND DISTRIBUTION: Are important surface or groundwater resources present? Is there potential for violation of ambient water quality standards, drinking water maximum contaminant levels, or degradation of water quality?</p>	<p><u>Action Alternative:</u> The seismic company is prohibited from any seismic activity within 300 feet of any springs, water wells, streams, lakes or water storage reservoir facilities to maintain the integrity of these water resources. If the stipulations are followed the project will not violate any ambient water quality standards within the area. Live springs are located within the SW4 of section 16, SENW, & NESW, Section 19, Township 27 North, Range 6 West. There is a reservoir located in the center of section 17 Township 27 North, Range 6 West.</p> <p><u>No Action Alternative:</u> The water quality, quantity, and distribution will not be impacted on this tract of state land. Water quality standards will not be violated. Drinking water will not be degraded in this area. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.</p>

II. IMPACTS ON THE PHYSICAL ENVIRONMENT

6. AIR QUALITY: Will pollutants or particulate be produced? Is the project influenced by air quality regulations or zones (Class I airshed)?

Action Alternative: The proposed seismic project is expected to have a minimal impact on the air quality in the surrounding area. An increase in traffic across this tract will produce some particulates throughout the entire course of the project. However, after the seismic company completes the project, traffic will return to normal in this area. The seismic company will be required to use existing roads and trails for moving equipment from place to place.

No Action Alternative: The air quality currently found on this tract of state land and within the surrounding area will not be impacted. No pollutants or particulates will be produced. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state land.

II. IMPACTS ON THE PHYSICAL ENVIRONMENT

7. VEGETATION COVER, QUANTITY AND QUALITY: Will vegetative communities be permanently altered? Are any rare plants or cover types present?

The vegetative communities found within the project area consist of native rangeland including the following plants: western wheatgrass (*Agropyron smithii*), needle-and-thread (*Stipa comata*), blue grama (*Bouteloua gracilis*), prairie junegrass (*Koeleria pyramidata*), green needlegrass (*Stipa viridula*), sedges (*Carex spp.*), sandberg bluegrass (*Poa secunda*), cudweed sagewort (*Artemisia ludoviciana*), fringed sagewort (*Artemisia frigida*), dense clubmoss (*Selaginella densa*), silver sagebrush (*Artemisia cana*), and woods rose (*Rosa woodsii*). These plant communities will be impacted from traversing equipment and compacting the vegetation. The impacts will be short term however, as the plants will fully restore after a couple growing seasons. It is important to keep the impact 'short term' by conducting activity during dry or frozen conditions only.

Action Alternative: The proposed project is expected to have a minimal impact on the vegetative cover, quantity, and quality of the native rangeland. There will be no vehicular activity, other than specified on the plat map for this project. Conquest will settle all surface damages with the appropriate surface lessee within a reasonable time period following the completion of the seismic project. The overall disturbance is expected to be minimal, as the seismic activity will only be allowed to take place during frozen or dry surface conditions.

No Action Alternative: The vegetative communities found throughout the proposed project area will not be altered. No rare plants and cover types exist in this area. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.

II. IMPACTS ON THE PHYSICAL ENVIRONMENT

8. TERRESTRIAL, AVIAN AND AQUATIC LIFE AND HABITATS: Is there substantial use of the area by important wildlife, birds or fish?

Action Alternative: The area of the proposed activity is used by many different types of wildlife and bird species. West of U.S. Highway 287 is considered Grizzly Bear Habitat. Wildlife may be temporarily dispersed in this area, throughout the course of the seismic project. Wildlife and bird species found in this area will not be permanently relocated as a result of this activity. Once the project is completed, wildlife and bird species will return to normal activities in this area. Wildlife habitat will not be significantly impacted by the seismic project.

No Action Alternative: The terrestrial and avian life and their habitats associated with this tract of state land will not be altered. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across these tracts of state grazing lands.

9. UNIQUE, ENDANGERED, FRAGILE OR LIMITED ENVIRONMENTAL RESOURCES: Are any federally listed threatened or endangered species or identified habitat present? Any wetlands? Sensitive Species or Species of special concern?

Action Alternative: The timing of this project will take place while the ground is frozen or dry. This will minimize the overall disturbance to existing habitat types, agricultural commodities, and the native rangeland. Federally listed, threatened, and endangered species will be able to migrate through this area with minimal disturbance. Wildlife and bird species may be temporarily displaced with this type of activity. However, these species will not be permanently relocated as a result of this type of activity. The seismic company will complete their work in one to two days and they will leave the area completely. All wildlife species found in this area will return to normal everyday activities, once the seismic company finishes the project and leaves this area. There are no wetlands located within the immediate area of the proposed disturbance on this tract of state land.

No Action Alternative: The unique, endangered, fragile or limited environmental resources found within the immediate area of the proposed project will not be impacted. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state grazing lands.

II. IMPACTS ON THE PHYSICAL ENVIRONMENT

<p>10. HISTORICAL AND ARCHAEOLOGICAL SITES: Are any historical, archaeological or paleontological resources present?</p>	<p>Action Alternative: The Montana DNRC has surveyed the proposed project area for existing cultural resources. No historical, archaeological, or paleontological resources are known to exist in the area of the proposed disturbance. The Montana DNRC Archaeologist, Patrick Rennie, was contacted for his input on cultural resources in this area. He has seen no evidence that 3-D seismic activities have an ability to impact any kind of cultural resource, when done on frozen or dry ground.</p> <p>No Action Alternative: Unknown or buried historical and archaeological resources present on this tract of state land will not be disturbed. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.</p>
<p>11. AESTHETICS: Is the project on a prominent topographic feature? Will it be visible from populated or scenic areas? Will there be excessive noise or light?</p>	<p>Action Alternative: The area that will be disturbed throughout the course of this project will be visible to the public until next spring, when native vegetation begins new growth and new agricultural commodities are seeded on the agricultural land. The project will create some excessive noise throughout the entire course of the seismic project. However, the noise levels will return to normal once the project is completed and the seismic company pulls out of the area.</p> <p>No Action Alternative: The aesthetic character currently found on this tract of state land will not be altered. The proposed area of disturbance will not be visible to the public. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.</p>
<p>12. DEMANDS ON ENVIRONMENTAL RESOURCES OF LAND, WATER, AIR OR ENERGY: Will the project use resources that are limited in the area? Are there other activities nearby that will affect the project?</p>	<p>Action Alternative: These native grazing lands will receive minimal, short-term impacts with this type of activity. The project will take place while the ground is frozen or dry, in order to limit the impacts on the native rangeland. The project will not use resources that are limited in the area.</p> <p>No Action Alternative: There will be no demands on the environmental resources of land, water, air or energy that is currently found on this tract of state land. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state grazing lands.</p>
<p>13. OTHER ENVIRONMENTAL DOCUMENTS PERTINENT TO THE AREA: Are there other studies, plans or projects on this tract?</p>	<p>Action Alternative: The DNRC will continue to monitor mineral and surface management activities on state lands to assess the impacts of these types</p>

II. IMPACTS ON THE PHYSICAL ENVIRONMENT

of projects on the surrounding ecosystem. The Montana DNRC will continue to administer the licensed activities that are currently authorized to take place on this tract of state land.

No Action Alternative: No further studies, plans, or projects will be needed. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state grazing lands. The Montana DNRC, Trust Land Management Division, Conrad Unit Office will continue to monitor these tracts of state land, in accordance with Montana State Statute.

III. IMPACTS ON THE HUMAN POPULATION

RESOURCE

POTENTIAL IMPACTS AND MITIGATION MEASURES

14. HUMAN HEALTH AND SAFETY: Will this project add to health and safety risks in the area?

Action Alternative: The seismic company, its subcontractors, and/or their employees understand the risks involved with this type of project. They assume the risks involved in seismic project as an occupational hazard. The project will not add to the human health and safety risks of the people who live and work in this area.

No Action Alternative: The human health and safety risks found in this area will continue to remain minimal. There will be no human health or safety risks to the seismic company, subcontractors, and/or its employees. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state grazing lands.

<p>15. INDUSTRIAL, COMMERCIAL AND AGRICULTURAL ACTIVITIES AND PRODUCTION: Will the project add to or alter these activities?</p>	<p><u>Action Alternative:</u> The Montana DNRC has set up stipulations for the seismic company to ensure that grazing activities will not be altered with this type of project. The native rangeland will be impacted with this type of activity. The proposed project will compress the native grasses and forbs, but will not impact the long-term, future forage productivity of the grazing land. Surface damages will be settled with the state's surface lessees within a reasonable time period following the completion of the proposed seismic project. _</p> <p><u>No Action Alternative:</u> The industrial, commercial, and agricultural activities will not be altered on this tract of state land. Native rangeland forage production will not be reduced. There will be no soil compaction on the agricultural land from the heavy seismic recording vehicles. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.</p>
<p>16. QUANTITY AND DISTRIBUTION OF EMPLOYMENT: Will the project create, move or eliminate jobs? If so, estimated number.</p>	<p><u>Action Alternative:</u> The project will not alter the quantity and distribution of employment in this area. The seismic project will create short-term jobs for LXL Consulting LTD. employees, but will have no impact on the local quantity and distribution of employment. If the project leads to a new large discovery, multiple new jobs could result. It is not feasible to estimate a number at this time.</p> <p><u>No Action Alternative:</u> The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state grazing land.</p>
<p>17. LOCAL AND STATE TAX BASE AND TAX REVENUES: Will the project create or eliminate tax revenue?</p>	<p><u>Action Alternative:</u> The project will create some additional tax revenue in Teton and Pondera Counties. The local and state tax bases will slightly benefit. However, if the project identifies new hydrocarbon reservoirs, the future tax base could see a substantial increase.</p> <p><u>No Action Alternative:</u> The local and state tax base will not be impacted. Tax revenue in Teton & Pondera Counties will remain the same. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across these state-grazing lands.</p>

<p>18. DEMAND FOR GOVERNMENT SERVICES: Will substantial traffic be added to existing roads? Will other services (fire protection, police, schools, etc) be needed?</p>	<p><u>Action Alternative:</u> The project will lead to an increase of traffic on the existing roads throughout the course of the project. Traffic will return to normal once the seismic company has completed the project. The project will not require other services such as police, fire departments, or schools. No additional government services will be needed on this tract of state land.</p> <p><u>No Action Alternative:</u> There will not be a substantial increase in traffic on the existing roads in this area. There will be no demand for additional government services. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across these state-grazing lands.</p>
<p>19. LOCALLY ADOPTED ENVIRONMENTAL PLANS AND GOALS: Are there State, County, City, USFS, BLM, Tribal, etc. zoning or management plans in effect?</p>	<p><u>Action Alternative:</u> The goal of the Montana DNRC/TLMD is to manage the State of Montana's trust land resources to produce revenue for the trust beneficiaries, while considering environmental factors and protecting the future income-generating capacity of the land. Exploring for natural gas and oil reserves on state land has the potential to increase the income-generating capacity of the land. If new reservoirs are found, additional revenue will be generated for the trust beneficiaries through royalties generated from the sale of natural gas and/or oil.</p> <p><u>No Action Alternative:</u> There are no known locally adopted environmental plans or goals for this tract of state land. The Montana DNRC/TLMD does not have any other plans or goals for this tract of state land at this point in time. There are no zoning or management plans in effect for this area.</p>

<p>20. ACCESS TO AND QUALITY OF RECREATIONAL AND WILDERNESS ACTIVITIES: Are wilderness or recreational areas nearby or accessed through this tract? Is there recreational potential within the tract?</p>	<p><u>Action Alternative:</u> The tract of state land identified within the proposed project does have recreational potential. This tract does have legal access for recreational activities. Upland game bird hunting, big game hunting, bird watching, and hiking are just some of the types of recreational activities that take place in this area. The proposed project will not alter these activities. Recreational activities will not be impacted with this type of project.</p> <p><u>No Action Alternative:</u> The access to and quality of the wilderness and recreational activities found in this area will continue to remain the same. This tract of state land does have legal access and will continue to be used for recreational purposes by people who possess a Montana State Conservation License.</p>
<p>21. DENSITY AND DISTRIBUTION OF POPULATION AND HOUSING: Will the project add to the population and require additional housing?</p>	<p><u>Action Alternative:</u> The density and distribution of population and housing will not be impacted with this type of project. The proposed activity will increase traffic on the designated roads into the areas of the project. The increase in traffic will only occur during the initial stages of the seismic project. This area is primarily used for livestock grazing purposes and the production of dryland agricultural commodities.</p> <p><u>No Action Alternative:</u> The density and distribution of population and housing will not change in this area. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state agricultural and grazing land.</p>
<p>22. SOCIAL STRUCTURES AND MORES: Is some disruption of native or traditional lifestyles or communities possible?</p>	<p><u>Action Alternative:</u> This project will have a minimal impact on the traditional lifestyles found within this area. The social structures and mores will not be impacted by the proposed seismic activity, especially since these communities are located in rural areas.</p> <p><u>No Action Alternative:</u> The social structures and mores will continue to stay the same. The native and traditional lifestyles found in this area will not be disrupted. The Montana DNRC will not issue Conquest a seismic permit to conduct a 3-D seismic project across this tract of state grazing lands.</p>

IV. FINDING	
25. ALTERNATIVE SELECTED:	Approve Seismic Permit #1505
26. SIGN4IFICANCE OF POTENTIAL IMPACTS:	<p>Primary Petroleum and Conquest Seismic Services have applied for a 3-D seismic project on approximately 2,922.8 acres of state land. Energy sources will be generated by using 2 vibroseis trucks. The overall goal of this seismic project is to locate oil and/or gas producing formations. The seismic line will minimally impact state and private owned surface. The majority of surface impacts would result from the compaction of the vibrating platform and the manipulation of motorized vehicles on the ground surface. Impacts are minimal, temporary in nature and not cumulative. State land inventoried is classified grazing and agricultural land. Surface damages have been settle with the state and surface lessee. Overall, this project will not have negative impacts to the environment if the Department's terms and conditions are followed. If viable natural gas and/or oil reservoirs are located under state land, then the school trust will likely economically benefit from this project over the long term.</p>
27. Need for Further Environmental Analysis: <input type="checkbox"/> EIS <input type="checkbox"/> More Detailed EA <input checked="" type="checkbox"/> No Further Analysis
